

ABSTRACT

Provided is an apparatus for cleaning eyeglasses that includes a housing, a fluid reservoir, and an evacuation apparatus (such as a pump) for pressurized evacuation of fluid out of the fluid reservoir. Two arms are attached to the

5 housing at their proximal ends and, in their nominal orientations, extend (preferably at an outward angle) from the housing. In a representative embodiment, each arm has a wiping pad at its distal end and is spring-biased into its nominal orientation, such that the wiping pads may be compressed toward each other. Optionally, the fluid reservoir is substantially shape-retaining

10 and is provided with a burstable seal.
